PROFILE

Backend engineer, 3+ years in production fintech. I build and scale high-availability Node.js/TypeScript systems serving 100k+ users: resilient REST APIs, event-driven microservices (RabbitMQ), containerized infrastructure (Docker), automated CI/CD (Jenkins), and observability (Grafana). Track record: cut production Docker images 50%, lifted app performance 20% via query optimization + caching. English C2 (EF SET 71/100). Open to relocation (DACH/Nordics/Singapore).

EXPERIENCE

Back End Developer — Traders Family · Aug 2023 – Present

North Jakarta, Indonesia · fintech

- **Performance:** improved app performance **20%** through query optimization, caching strategies, and database management across **100,000+ unique users**.
- **Infrastructure:** spearheaded container optimization, cutting production Docker image size **50%** — faster deploys, lower cloud cost.
- **CI/CD:** built and maintained Jenkins pipelines for Docker-based apps, commit → production.
- **Observability:** built Grafana dashboards for system + application health; proactive detection, high availability.
- **APIs:** engineered and scaled resilient RESTful APIs (Node.js + TypeScript) powering core application functionality.
- **Event-driven:** microservices with RabbitMQ for inter-service communication.
- **Modernization:** led refactor of key projects to TypeScript — better maintainability, fewer runtime bugs.
- **Security & testing:** industry-best-practice encryption (bcrypt) + auth (JWT); comprehensive unit/integration test coverage.

Web Developer — Chingu · Jul 2023 – Sep 2023

Remote (cohort program)

- Ran weekly sprint meetings; built responsive data-visualization tool (NASA API) in a cross-functional remote team.
- Optimized front-end performance, implemented caching, integrated third-party APIs.

PROJECTS

- **Tokopaedi — E-commerce backend** (Jan–Dec 2024): high-throughput backend on **Fastify + TypeScript**, <50ms response targets, schema-based validation, **TypeORM** entity design, Service-Repository pattern.

- **TopUp Store — Game top-up platform** (2026): live production platform on **Go + PostgreSQL + Redis + Docker**. QRIS payments (Midtrans), Digiflazz H2H integration, WhatsApp notifications (Fonnte), webhook idempotency, exponential-backoff retry, Prometheus metrics, health/readiness probes, GitHub Actions CI/CD, multi-stage Docker build.
- **Meteoros — NASA data explorer** (Chingu Voyage 45): responsive visualization of large meteor datasets, optimized mobile rendering.

TECH STACK

- **Languages:** TypeScript, JavaScript, Go, SQL
- **Backend:** Node.js, Fastify, Express, REST APIs, RabbitMQ
- **Data:** MySQL, PostgreSQL, TypeORM, NoSQL
- **Infra/DevOps:** Docker, Jenkins, Grafana, Nginx, AWS, Linux, CI/CD
- **Frontend (familiar):** React.js, Next.js, HTML, CSS
- **Other:** bcrypt, JWT, unit/integration testing, Git

EDUCATION

Universitas Terbuka (Open University), Indonesia — Feb 2024 – Mar 2028

Bachelor's in Information Systems (Sistem Informasi) · GPA 3.60

PT. DumbWays Indonesia Teknologi — Jan 2023 – Jul 2023

Fullstack Developer (bootcamp)

CERTIFICATIONS

- **EF SET English** — 71/100 (C2 Proficient), Jan 2026
- **Introduction to Back-End Development** — Coursera, Oct 2023
- **The Complete SQL Bootcamp** — Udemy, Jun 2023
- **ReactJS Fundamental** — Progate, Oct 2022
- **Web Development (Node.js)** — Progate, Oct 2022

LANGUAGES

- **English:** C2 (EF SET 71/100)
- **German:** elementary
- **Indonesian:** native
